

JavaScript this object!

Waar gebruiken we het voor.

class Student {

constructor() {  
 this.Name = "beend";  
}

set Name(Name) {  
 this.Name = Name;  
}

let test = new Student();

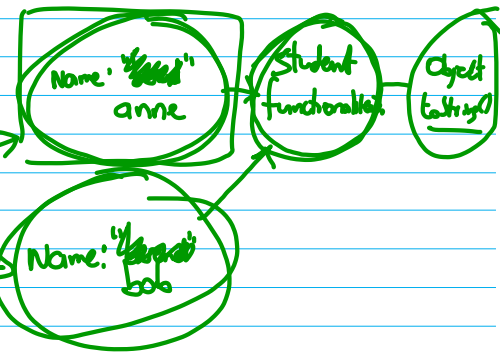

let test2 = new Student();

test.set Name("bob");

test.set Name("anne");

document.body.addEventListener("click", function() {  
 console.log(this);  
});

document.body.onclick = function

# JavaScript this object!

Waar gebruiken we het voor:

```
class Student {
```

```
  constructor() {  
    this.name = "berend";  
  }  
}
```

```
set Name(Name) {  
  this.name = Name  
}
```

```
let test = new Student();
```

```
let test2 = new Student();
```

```
test2.set Name("bob");
```

```
test.set Name("anne");
```

Object  
test1  
Name: ~~berend~~  
anne  
Student  
functional

Object  
test2  
Name: ~~berend~~  
bob

```
document.body.addEventListener("click", function() {  
  console.log(this);  
});
```

```
document.body.onclick = function
```
